## SERVICES

System design, implementation and support of custom database information systems for desktop, enterprise and web applications.

Data driven interactive web site design and management.

State of the art techniques backed by an extensive knowledge of several technologies and platforms.

A team of consultants with high-quality, comprehensive services and a variety of expertise to create a wide range of desktop, web and enterprise solutions.

Enhancing business processes by applying relational database concepts to maximize the usefulness of information and enhance the efficiency of operation, while maintaining a smooth transition from the old process to the new environment.

Creating Windows and web based user friendly interfaces for data entry, retrieval and reporting.

Working with clients in an interactive fashion to understand their needs and how they do business, then translate this information into usable applications, from conception to production! If you more or less know what you need, we can make it happen. We specialize in 'going the extra mile'. Exhaustive application testing is done throughout the development cycle.

Adding a professional 'look, feel and functionality' to an existing user-created prototype application.

AFFILIATIONS: Microsoft MVP (Access). Number Two Microsoft Access Expert on Experts-Exchange.com. Hall of Fame member of the Microsoft Access Users Group of San Diego. Treasurer of Blues Lovers United of San Diego, 1999-2008.

## FEES / PAYMENTS / SUPPORT

---

### General.

Fees are determined by the complexity of the project, the required time frame to complete the project and whether or not any royalties may be involved.

### Client Target Budget.

In all cases, every effort is made to work within a target budget that a prospective client may have in mind - IF the client has a realistic concept of the complexity, scope and related time frame to complete the project. Sometimes, however a client may initially feel that "this won't take too long..." or "this doesn't look too hard...". This however, may not be realistic with respect to the need for a bug free, user-friendly end product with a professional look and feel!

### Hourly Fee.

Normally, ADI charges an hourly rate for time and materials since experience has shown that variables and uncertainty make the complete requirements unpredictable in advance.

### Fixed Fee.

If the complexity, scope and related time frame are well understood by the client and ADI, a fixed fee may be quoted for a given project.

### Payment Schedule.

Hourly fees are invoiced one per week and due on receipt.

Fixed fees are made in several equal payments over the duration of the project.

For both cases above, once a commitment has been made between the client and ADI to proceed with the project, a retainer fee is required which is non-refundable in the event the project is canceled by the client.

### Support.

ADI will work with the client on an hourly or fixed fee basis to implement any changes or enhancements. ADI is generally available via phone, cell phone and email. Every effort will be made to return client inquiries in a timely fashion. Clients are notified well in advance of any time when ADI consultants may not be available, such as vacations, etc.

### Warranty.

Upon client acceptance of the project, ADI offers lifetime warranty which covers any non-Microsoft related program bugs at no additional cost to the client. The warranty is cancelled immediately should any other developer or organization not authorized by ADI perform any work on the project.

### Application Updates.

When changes, enhancements or new releases are made to the project, clients can easily download updates directly from the ADI web site. When necessary (and geographically practical), ADI will make on-site visits.

### Bottom Line.

Bug free, user friendly applications and 110% client satisfaction are the top priority goals of ADI. And our track record over the history of the company backs this up.

## CLIENTS / PROJECTS / REFERENCES

Prospective clients are encouraged to check the following references!

Citgo Oil Co., Corpus Christi, TX  
 512.844.5774 ... Jeff Nesloney

Automated data entry, data retrieval and reporting system to replace DOS-based data entry system. Combined databases and greatly simplified data entry and reporting process.

Citgo Oil Co., Corpus Christi, TX  
 512.844.5774 ... Jeff Nesloney

Report creation and selection interface to extract data from mainframe database and generate charts in Excel using OLE automation. Went from manual process to totally automated point-and-click process.

Manti Resources, Corpus Christi, TX  
 512.888.7708 ... Robert Rosales

Restructure and creation of an enhanced user interface and reporting system for oil well tracking and financial analysis. This included combing two separate databases into a single relational database.

MAI Systems, Irvine, CA  
 800.624.1024 ... Julie Wellman

Creation of an enhanced multi-user interface and front-end to a Btrieve/DOS-based inventory control system. This included integrating two similar databases into a single relational database to be used both by inventory and marketing/sales personnel

Marcus & Millichap Commercial Real Estate Company, Irvine, CA  
 714.538.5075 ... Jack Hopkins

Created an automated information download and tracking system to retrieve, modify and archive data from an on-line real estate information service.

Western Medical Center, Tustin, CA  
 800.707.1707 ... Doug Corbin

Multi-user prospect tracking, seminar scheduling and reporting system for a hospital fund raising organization within a medical center.

## COMPANY HISTORY

---

Established in 1984 as Emron, inc by founder and CEO Joe Anderson in Diamond Bar, CA. Provided database and computer consulting services in the Los Angeles area until late 1994.

Relocated to the South Texas area in late 1994 as AllData, inc., continuing to provide database consulting services both nationwide and to the international market.

Relocated back to Southern California (San Diego) March, 1998.

Relocated to Rancho Cucamonga, CA, November 2007.

---

Specializing in Microsoft Access relational database design since release 1.0 (circa 1992), completing numerous projects for clients nationwide. Currently focusing on data driven (web and desktop) utilizing Macromedia FlashMX connected to various database backends such as Microsoft Access and SQL Server.

---

Developer of 'Contacts Unlimited' and 'Pro Series' products for Access To Business (A2B) located in Seattle, WA, marketed worldwide by A2B and other sources.

---

Developer of a multi-user Computer Aided Dispatch database system used throughout the ambulance business nationwide for Recordata West, Burbank, CA. The entire product was developed in Business Basic / BBX / IBM Risc 6000 platform.

---

Utilizing:

Microsoft Access / VBA  
Microsoft ASP.Net / C# / XML  
Microsoft SQL Server  
Microsoft Visual Studio.Net  
Adobe CS4 Web Premium

---

**CEO RESUME**

**1977-1985**

Advanced Development  
Group leader; system design; firmware and digital circuit design.

MAI Systems (formerly MAI / Basic Four Inc.),  
Irvine, CA  
Computer Systems Mfg.

Managed development of an advanced personal office workstation prototype.

Touch screen interface system software / hardware / firmware.

Generated VLSI strategy for company.

Group leader of system, hardware, firmware and production release for the MAI 2000 computer system.

**1976-1977**

Senior Project Engineer  
System, hardware & firmware design and production release of four microprocessor-based products.

Comtec, Inc.,  
Irvine, CA  
Process Control Systems

Designed process control computer and Remote Temperature Test system.

Designed Programmable Clean and Etch and Crystal Bank Sorter systems.

**1975-1976**

Senior Development Engineer  
Design team member on laser scanner for UPC bar code point of sale system.

Coherent, Inc.,  
Palo Alto, CA  
Laser Systems Mfg.

Assisted POS manufacturers in defining interface requirements.

Hardware and firmware design of several interface circuits for various POS terminals.

**1969-1975**

Development Engineer  
Analog, digital hardware and systems design.

Hughes Aircraft,  
Fullerton, CA  
Ground Systems Group.

Microprocessor sub systems for submarine display system.

Radar video distribution system; Trackball interface for a radar display system.

Multiple smaller projects and studies.
